Baby Details:

MRN:	579283	IP Number :	IP/2207549
Name :	B/O Gowri	Baby's Blood Group :	O Positive
Birth Date & Time :	05-10-2022 ; 08:00:AM	Date of Admission :	05-10-2022
Sex :	Male	Date of Discharge :	02-11-2022
Gestation :	35+6	Birth Weight (g) :	3320
Corrected Gestational Age :	39+6	Birth OFC (cm) :	N/A
Day Of Life :	28	Birth Length (cm) :	N/A
Birth Status :	Extramural	Discharge Weight (g) :	2910
Mode of delivery :	Emergency Caesarian	Discharge OFC (cm) :	32
Birth Order:	Singleton	Discharge length (cm) :	48

Diagnosis :

1. Preterm / AGA
2. Respiratory distress syndrome (Surfactant given outside)
3. Meconium aspiration syndrome
4. Pulmonary arterial hypertension (iNO therapy)
5. Suspected sepsis
6. Pulmonary air leak syndrome
7. Infant of diabetic mother
8. IVC clot
9. Suspected medullary sponge kidney / Nephrocalcinosis
10. Bilateral pneumonic consolidation
11. Probable Chronic lung disease
12. Late onset sepsis

Procedures:**Mother Details :**

Mother's Name : Mrs. Gowri

EDD by dates : 03-11-2022

Age :

Conception : ART

Mother's Blood Group : B Positive

Obstetric history: Gravida 0 Para 0 Live 0 Abortion 0

Mother's Medical Problems :**Problems****Medications**

Gestational diabetes mellitus

Pregnancy problems:**Complications Treatment**

Birth:

Baby was born at 35+6 weeks of gestation by emergency caesarian delivery.

Indication : Meconium Stained Liquor. Mother received antenatal steroids.

Baby reportedly did not require any resuscitation at birth.

Respiratory system:

He did not require intubation at birth but required invasive ventilation during his neonatal stay. He required SIMV + iNO during ICU stay.

He required HHHFNC during ICU stay.

HBO2 therapy was provided.

Invasive Ventilation 9 days

Non Invasive Ventilation 10 days

Other Respiratory Support 3 days

He received surfactant therapy (at outside hospital).

He required insertion of an intercostal drain.

He is currently spontaneously breathing in room air.

Cardiovascular System:**Gastrointestinal System:**

He received IV fluids following admission to the neonatal unit. He did not receive parenteral nutrition.

Milk feeds were commenced from day 4. This was gradually increased as tolerated.

He did not develop NEC.

He reached full feeds for the first time on day 9. Due to other medical reasons, milk feeds were reduced on days 7, 11 and 24. He again reached full feeds on days 15..

At discharge, he is paladai/spoon fed with formula milk.

Central Nervous System:**Sepsis:****Ophthalmology:****Renal, Hematology, electrolytes, Glucose and Jaundice:****Newborn Screening:****Communication with parents:****Discharge Medications:****Vaccine:****Discharge Instructions:****Follow Up:**

Attenders were willing to continue further treatment at Government Hospital. Hence being discharged
