

DEPARTMENT OF HISTOPATHOLOGY
LYMPHORETICULAR PATHOLOGY DIVISION

Patient Name: Master VINITH Biopsy procedure date: 17.08.2023
Age/Sex: 14 YEARS/MALE Reception and Registration date: 17.08.2023
Unique ID No: NXT12223 Sign out date: 18.08.2023
Biopsy number: S1865/23
Referral Physician : DR. D.V. SURESH (CONSULTANT NEONATAL PAEDIATRICIAN)
Hospital: SKS HOSPITAL, SALEM

LYMPHORETICULAR PATHOLOGY REPORT

CLINICAL DIAGNOSIS: Fever with joint pain and pancytopenia

SAMPLES RECEIVED: Received an EDTA bone marrow aspirate sample

LIGHT MICROSCOPIC MORPHOLOGY:

Bone marrow aspirate smears are aparticulate, diluted and hypercellular for age

Bone marrow differential count:

Nn-erythroid: Erythroid ratio – 49:1

Erythroid (2%); Plasma cells (1%); Basophils (1%); Blasts (96%)

Blasts are 2.5 to 3 times the size of mature lymphocytes, have bilobed nuclei, few with conspicuous nucleoli and moderate basophilic cytoplasm with fine granules. Rare Auer-rods are noted.

Megakaryocytes are rarely seen

IMPRESSION:

BONE MARROW (ASPIRATE): ACUTE LEUKEMIA, FAVOUR MYELOID; LIKELY PROMYELOCYTIC

Remarks: Please correlate clinically and with **work-up for acute leukemia**.

Note: Blocks/slides shall be provided only after official written request is submitted to our lab from the treating physician.
