

- H/cyanosis episodes
- H/c ? Breath holding spells } around 1 year of age

Op evaluation - Bil Abductor palsy noted

2 Decho. (N).

• S. calcium - report not found

Thyroid - lower limit T3.

USG thyroid (N)

MRI Brain (N).

e/e Alert

Bu mild Temporal asymmetry

prominent eyes ears, long eyelashes.

long philtrum

small chin.

? mild retrognathia.

hands - (N)

feet - (N)

Back (N)

Genitalia - not seen.

• fair wt gain

• Dev. appear (N) for age

• No family H/c

CHD / psychiatric illness
hypocalcaemia

CI Nonconsanguineous parents

2nd born - IVF conception

congenital Bu vocal cord palsy

Dev. (N) for age

underwent tracheostomy

Not dysmorphic (more like father)

No family H/c

cong. Bu vocal cord palsy

3 Idiopathic

? genetic - 22q11.2 deletion

But very rare

Plan

1) suggested exome first (to cover 22q11 region)

2) To check S. calcium, Thyroid shadow in CXR, USG Abd.
